

The Non-Zoom Box Tutorial!

Begin with two squares of paper, one slightly smaller than the other.

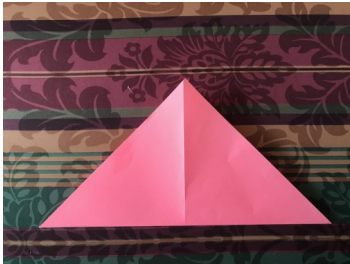

Repeat the following process for each square.

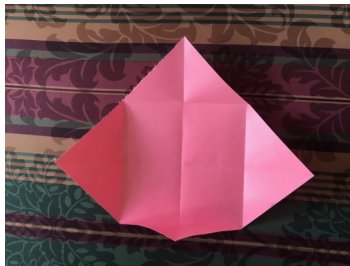

1. Take the bottom right corner and fold it to the top left corner forming a triangle.

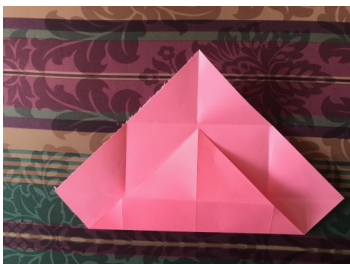

2. Unfold and fold diagonally the other direction.

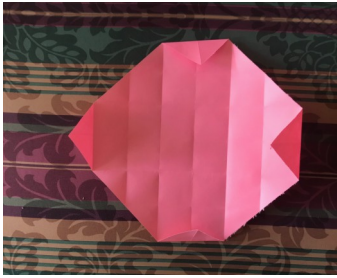

3. Unfold and fold each corner to the center.

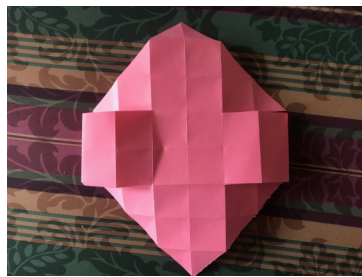

4. Take bottom corner and fold to the top first fold. Rotate and repeat for all sides.

5. Make the final preliminary fold. Take each corner and fold it up to the fold mark immediately above it.

6. Make the cuts (the only “iffy” part). Turn the paper over. Choose one of the corners. Starting with the first fold to the right of center, **cut from the bottom to the first fold below center**. Repeat **cut on first fold to the left of center**. Cut the **opposite side** the same way. Turn one quarter turn to the right.

7. Turn paper over. From the bottom point, fold point to first fold and then fold both to the second fold. Fold all one more time, **but only until the folded side sits vertically**. Fold left and right corners in. Repeat for the other side.

8. Turn so remaining points are perpendicular. Take the **wings** and fold them so they **form a side of the box**. Fold the bottom point up one fold and then fold over the wings. Repeat other side to complete box. Fill. Cover. Be proud!
